|  |   |   |   |                      |

\*For the purposes of this form, "individual" means the "person" referred to in Clause 2.17.4.7.(1)(d), Article 2.17.5.1. and all other persons who are exempt from qualification under Subsections 2.17.4. and 2.17.5.

NOTE:

- 1. Firm and Individual BCIN numbers are not required for building permit applications submitted prior to January 1, 2006
- 2. Schedule 1 does not need to be completed by architects, or holders of a Certificate of Practice or a Temporary License under the Architects Act.

### **Energy Efficiency Design Summary: Prescriptive Method**

(Building Code Part 9, Residential)

This form is used by a designer to demonstrate that the energy efficiency design of a house complies with the building code using the prescriptive method described in Subsection 3.1.1. of SB-12. This form is applicable where the ratio of gross area of windows/sidelights/skylights/glazing in doors and sliding glass doors to the gross area of peripheral walls is not more than 22%.

### Guide to the Prescriptive Energy Efficiency Design Summary Form

This form must accurately reflect the information contained on the drawings and specifications being submitted. Refer to Supplementary Standard SB-12 for details about building code compliance requirements. Further information about energy efficiency requirements for new buildings is available from the provincial building code website or the municipal building department.

The building code permits a house designer to use one of four energy efficiency compliance options:

- 1. Comply with the <u>SB-12 Prescriptive</u> design tables (this form is for this option (Option 1)),
- 2. Use the <u>SB-12 Performance</u> compliance method, and model the design against the prescriptive standards,
- 3. Design to *Energy Star,* or
- 4. Design to <u>R2000</u> standards.

#### COMPLETING THE FORM

#### **B.** Compliance Options

Indicate the compliance option being used.

• <u>SB-12 Prescriptive</u> requires that the building conforms to a package of thermal insulation, window and mechanical system efficiency requirements set out in Subsection 3.1.1. of SB-12. Energy efficiency design modeling and testing of the building is not required under this option. Certain substitutions are permitted. In which case, the applicable airtightness targets in Table 3.1.1.4.A must be met.

#### C. Project Design Conditions

*Climatic Zone:* The number of degree days for Ontario cities is contained in Supplementary Standard SB-1 *Windows, Skylights and Glass Doors:* If the ratio of the total gross area of windows, sidelights, skylights, glazing in doors and sliding glass doors to the total gross area of walls is more than 17%, higher efficiency glazing is required. If the ratio is more than 22%, the *SB-12 Prescriptive* option may not be used. The total area is the sum of all the structural rough openings. Some exceptions apply. Refer to 3.1.1.1. of SB-12 for further details. *Fuel Source and Heating Equipment Efficiency:* The fuel source and efficiency of the proposed heating equipment must be specified in order to determine which <u>SB-12 Prescriptive</u> compliance package table applies. *Other Building Conditions:* These construction conditions affect <u>SB-12 Prescriptive</u> compliance requirements.

#### **D. Building Specifications**

*Thermal Insulation*: Indicate the RSI or R-value being proposed where they apply to the house design. Under the <u>SB-12 Prescriptive</u> option, alternative ICF wall insulation is permitted in certain conditions where other design elements meet higher standards. Refer to SB-12 for further details. Where effective insulation values are being used, the Authority Having Jurisdiction may require supporting documentation.

#### BUILDING CODE REQUIREMENTS FOR AIRTIGHTNESS IN NEW HOUSES

All houses must comply with increased air barrier requirements in the building code. Notice of air barrier completion must be provided and an inspection conducted prior to it being covered.

The air leakage rates in Table 3.1.1.4.A are not requirements. This provision is a voluntary provision for when credits for airtightness are claimed. Credit for air tightness allows the designer to substitute the requirements of compliance packages as set out in Table 3.1.1.4.B or 3.1.1.4.C. Neither the air leakage test nor compliance with airtightness targets given in Table 3.1.1.4.A are required, unless credit for airtightness is claimed. Table 3.1.1.4.A provides airtightness targets in three different metrics; ACH, NLA, NLR. Any one of them can be used. OBC Reference Default Air Leakage Rates (Table 3.1.1.4.A)

| Duilding Tung     |             |                                      | Airtightness Targets                     |                         |                            |  |
|-------------------|-------------|--------------------------------------|--|-------------------------|----------------------------|--|
| Building Type     | ACH @ 50 Pa | NLA @                                | ) 10 Pa                                  | NLR @ 50 Pa             |                            |  |
| Detached dwelling | 2.5         | 1.26 cm <sup>2</sup> /m <sup>2</sup> | 1.81 in <sup>2</sup> /100ft <sup>2</sup> | 0.93 L/s/m <sup>2</sup> | 0.18 cfm50/ft <sup>2</sup> |  |
| Attached dwelling | 3.0         | 2.12 cm <sup>2</sup> /m <sup>2</sup> | 3.06 in <sup>2</sup> /100ft <sup>2</sup> | 1.32 L/s/m <sup>2</sup> | 0.26 cfm50/ft <sup>2</sup> |  |

The building code requires that a blower door test be conducted to verify the air tightness of the house during construction if the <u>SB-12 Prescriptive</u> option with airtightness credit being applied. Results of the airtightness test may need to be submitted to the Authority Having Jurisdiction. Airtightness of less than 2.5 ACH @ 50 Pa (or NLA or NLR equivalent) in the case of detached houses, or 3.0 ACH @ 50 Pa (or NLA or NLR equivalent) in the case of attached houses is necessary to meet the required energy efficiency standard.

#### E. House Designer

The building code requires designers providing information about whether a building complies with the building code to have a BCIN. Exemptions apply to architects, engineers and owners designing their own house.

#### Example Diagram

 ✓ -Provide the property Legal description and include a survey if available. Indicate any iron markers or survey stakes on the diagram.

✓ -All relevant distances and property dimensions

- ✓ -Location and dimension of proposed construction and label as "proposed". Include all relevant information . ie. Overhangs, cornices, sills, windows, chimneys, hottubs, fences.. etc.
- ✓ -Location of all structues, garages, sheds, well, septic, decks, docks, etc. on the subject property
- ✓ -Abutting property information ie. location of main dwelling, wells, septic, decks, garages, shed etc.
- ✓ All adjacent roads , easments and right of ways, train tracks, rivers, paths, et.
- ✓ -Bushes, hedges, walkways and driveways
- Include 3 dimensional drawings if applicable ie. Height of proposed construction, site lines and any other pertinent information.

Measurements must be legible. Exact measurements are required. Please use metric and bracket imperial measurements if desired.

### ENCROACHMENT OF OVERHEAD AND UNDERGROUND ELECTRICAL POWER LINES

#### You are not only responsible to call before you dig to ensure you do not adversely affect buried utility cables, <u>BUT YOU MUST ALSO LOCATE YOUR BUILDING OR STRUCTURE TO MAINTAIN</u> <u>MINIMUM CLEARANCES FROM OVERHEAD POWER & UNDERGROUND POWER LINES.</u>

#### THIS CAN AFFECT THE LOCATION OF YOUR BUILDING OR STRUCTURE

(This notice is attached to all building permit applications. It contains information important to your project planning)

The permit applicant has a responsibility to ensure that the structure resulting from the permit application does not encroach on required clearances to overhead and underground power cables. Failure to identify and avoid these encroachments has, in the past, resulted in physical injury and/or unexpected costs to the applicant/owner. Expect that your building or part thereof will have to be moved or removed at your expense, where proper clearances have not been adhered to.

#### Legislation that controls minimum clearances for structures being built near overhead or underground power lines includes the following:

| <b>Ontario Electrical Safety Code</b><br><b>Section 75-312(3)</b> | Contact: | Electrical Safety Authority<br>Phone# 1-877-372-7233 |
|---|----------|--|
| Occupational Health & Safety Act<br>O. Regulation 213/91          | Contact: | Ministry of Labour                                   |
|   |          | <b>Construction Inspection</b>                       |
|   |          | Phone # 475-1691                                     |

# Note: No buildings or structures may be built over top of any underground power line without express written consent from that authority.

New driveways into building lots can significantly reduce clearances to power and communication cables that were not originally designated for vehicles passing underneath.

You are hereby advised, by way of this notice, that **you are responsible to consult with the above mentioned authorities having jurisdiction in this matter and that you must maintain these minimum requirement clearances,** in addition to any setbacks and clearances which may otherwise be required by zoning and building code regulations.
